

**Choose the sealant  
that will stick around  
before and after  
installation.**

# Staying power

- High quality adhesive
- Joins metal to metal
- Seals around windows, doors, more
- Roll won't telescope from heat before installation
- Adhesive really holds hot metal panels

Marco Industries has created a high quality **trimmable** joint and end lap sealing tape that solves the adhesive failure problems associated with hot metal roofing and wall jobs.

Mastixtape™ is made with a superior adhesive which is **non-staining, permanently flexible**, and stays in place during extreme heat. It seals around windows, doors, roof vents, stacks, access doors and other penetration points.

The adhesive actually **prevents the product roll from "telescoping"**... a common problem when other adhesives get too hot and cause a tape roll to start losing its shape. Which then causes the installer more handling problems and installation time.

Then, once Weathertite™ Mastixtape™ is applied, it truly adheres to the metal roof panel and **stays in position even on the hottest days**. So you don't have to mess with a failing adhesive strip sliding down the hot metal roof before you can overlay the next roofing panel.

Don't sweat your next metal roofing job. Choose Weathertite™ Mastixtape™ and get the job done easier and faster, even on the hottest days.
